Python® - 1500 Series Control Valves

Control valves are a key component in any pressure or temperature control application. With the increasing cost of fuel, delivering media in the most efficient way increases productivity by delivering the required pressure or temperature while avoiding excessive consumption. Precision control also provides repeatability and safety for any process.

Features

- Series 1500 valves are globe two-way single seated design valves, which deliver accurate and efficient control for most steam and liquid applications
- Body with top entry trim and bolted bonnet facilitates easy access to all internal parts for in-line inspection, maintenance, and trim replacement
- Carbon steel and stainless steel materials
- 2 Packings: Carbon filled PTFE chevron seals and grafoil
- Electric actuators for on/off and modulating characteristics
- Equal percentage and Linear characteristic trims for accurate control
- Pressure balanced configuration for improved shut off and high pressure applications
- Metal to metal seats rated for Class IV shut off
- Optional PTFE soft seat for Class VI shut off
- 17-4 PH h900 and Stellite plugs and seat for long service and better resistance
- 50:1 Rangeability
- Two pneumatic actuators per valve size
- 6-spring actuator design allows lower hysteresis and higher performance
- Pneumatic actuators tested to over 4 million cycles
- Live spring loaded teflon packing for long service and less maintenance

Trim Type

Contour Top Guided Parabolic Unbalanced

Equal percentage characteristic is ideal for temperature and flow control applications, or valves in parallel. This trim style is the most widely used for accurate control and precise repeatability.

Cage Guided Parabolic Pressure Balanced

Cage Guided Pressure Balanced is ideal for high pressure applications where the top guided trim may not have adequate shut off capabilities. A balanced trim equalizes the pressure acting above and below the plug, reducing required actuator thrust. This results in a higher shut off capability and a smaller foot print while providing precise control of the application.

Python® - 1500 Series Control Valves

Multi-Spring Actuators

Multi-Spring Actuators are diaphragm actuators with pre-compressed, multi-spring construction. They are compact, easy to maintain, and are suitable for both modulating and on/off applications. Models are available covering small to large thrust requirements.

Specifications

- Maximum Diaphragm Pressure:
60 psig (4 barg) for model 174, 348 and 700
- Actuator travel:
174: 20mm
348: 20mm/30mm/40mm
700: 30mm/40mm
- Diaphragm:
Nitrile reinforced with Nylon fiber
- Operating Temperature Range:
-40° to 176°F (-40° to 80°C)
- Connections:
1/4" NPT (F) for Models 174, 348 and 700
- Permissible Linearity and Hysteresis:
±5% of Signal Pressure Range

Features:

- Construction – Due to multi-spring arrangement, the actuators are lightweight and compact.
- Long service life – Rigid, rolling diaphragm construction and durable components provide a long lasting service life.
- Minimum maintenance – The actuators are virtually maintenance free.
- Accuracy – Rolling diaphragm construction provides a constant effective area throughout the stroke.
- Tested to over 4 million full stroke cycles.

Direct Acting Actuators (Fail Open)

The actuator stem moves downward with increasing diaphragm pressure. When this pressure is reduced, the opposing spring force moves the actuator stem upward. On air failure, the actuator stem is pulled to the extreme upward position by spring force.

Reverse Acting Actuators (Fail Close)

The actuator stem moves upward with increasing diaphragm pressure. When this pressure is reduced the opposing spring force moves the actuator stem downward. On air failure, the actuator stem is pushed to extreme downward position by spring force.

Table 5-1. Air Volume Required Per Stroke

Model Number	Cubic Feet/Stroke
174cm ² 20mm	0.014 ft ³ (0.0004 m ³)
348cm ² 20mm	0.027 ft ³ (0.0008 m ³)
348cm ² 30mm	0.041 ft ³ (0.0012 m ³)
348cm ² 40mm	0.053 cu.ft/stroke (0.0015 m ³)
700cm ² 30mm	0.085 cu.ft/stroke (0.0024 m ³)
700cm ² 40mm	0.113 cu.ft/stroke (0.0032 m ³)

Python® BEL– Belimo Electric Linear Actuator

For 24VAC/24VDC fail safe, proportional modulating control of the CV1500 in HVAC and hydronic systems.

Actuator sizing will be dictated by the valve size selection. All valve selections should be done in accordance with the flow parameters and system specifications. The actuator is mounted directly to the CV1500 bonnet by means of an innovative clamp and collar.

The actuator operates in response to a 2-10 VDC input signal, or with the addition of a 500 Ω resistor, a 4-20 mA input signal from an electric controller or positioner. A 2-10 VDC VDC feedback signal is provided for position indication.

Product Features:

- Power: 24VAC/VDC
- Fail Safe: 35 second run time
- Frequency: 50 or 60 Hz
- Pillar mechanical clamp collar connection
- Auto/Manual control
- Control Signal: 2-10V or 4-20mA
- Protection Class: Nema 2, IP54, UL enclosure type 2
- Shut Off: Up to 100psig on all sizes
- ½" – 1-1/2" Belimo SVKB24-SR
- 2" Belimo AVKB24-MFT

Technical Data	
Flow Characteristic	Equal Percentage or Linear
Leakage	ANSI Class IV (Metal to Metal) ANSI Class VI (PTFE Soft Seat)
Rangeability	50:1
Voltage	24VAC/24VDC
Control Signal	2-10V / 4-20mA

List of Materials	
Valve Body	Carbon Steel A216 Gr. WCB
Bonnet	Stainless Steel CF8M
Valve/Valve Seat	17-4 PH h900 / Standard Stellite / Option PTFE Soft Seat / Option - 388F (198C) Max.
Valve Spindle	ANSI SS 431
Gland Packing	Carbon Filled V-Teflon (450°F (232°C) Max.)

Armstrong® Python® - AEL Electric Linear Actuators

When accurate control of your steam or water application is desired and air is not available, the Python® AEL Electric Control Valve will deliver precise control. The electric version of the popular 1500 series control valve is built to out perform and deliver accurate control. The AEL Series Electric Control Valve is constructed and equipped with state of the art industrial materials combined with the standard 1500 series main valve.

Python® Series 1500
AEL Electric Actuator

Product Features:

- Power: 24V AC (120V AC or 240V AC available)
- Frequency 50 or 60 Hertz
- Terminal board connection
- Pillar mechanical connection
- Auto/Manual control
- Control signal 4-20 mA, 0-10 volts
- Protection class IP 67
- High thrust capabilities
- Electronic position control
- Metal internal gears
- Compact design
- Mounts to the standard 1500 Series valve body
- Actuators available for valves from 1/2" to 4"
- 135°F max. ambient temperature

Python® - Electric Actuated Model Identification

Armstrong®

Designs, materials, weights and performance ratings are approximate and subject to change without notice. Visit armstronginternational.com for up-to-date information.

**Armstrong® Python® - 1500 Series Control Valves****Valve Sizing**

To determine the size of valve you need, calculate the required Cv value for your application. Once you have calculated the required Cv, refer to the valve Cv charts on page 4 to determine the size and trim of valve. Globe style control valves have the best control in the midrange of the valve's capacity. It is best to pick a valve so the calculated Cv is between 15% and 85% of the valve's maximum Cv. See the formulas below for steam and water applications. Consult factory for other types of fluids.

For Saturated Steam ServiceSubcritical FlowWhen $\Delta P < 0.81(P_1/2)$

$$C_v = \frac{W}{2.1\sqrt{\Delta P(P_{1A} + P_{2A})}}$$

Critical FlowWhen $\Delta P \geq 0.81(P_1/2)$

$$C_v = \frac{W}{1.633(P_{1A})}$$

For Liquid Service

$$C_v = \frac{(GPM)\sqrt{G}}{\sqrt{\Delta P}}$$

Cv = Valve flow coefficient

W = Maximum flow capacity of steam, lbs/hr

P_{1A} = Inlet Pressure, psiga (psigg + 14.7)P_{2A} = Outlet Pressure, psiga (psigg + 14.7) ΔP = Pressure drop (P₁ - P₂) psig

GPM = Maximum flow capacity of Liquid, GPM

G = Specific Gravity

Actuator Sizing

To determine the required actuator, you need to determine the differential pressure (shut off pressure). The shut off pressure for a pressure reduction application is the pressure difference between P₁ and P₂. The shut off pressure for a temperature control application is the P₁ pressure.

Once you have calculated your shut off pressure, select the actuator model and spring setting range that exceeds your calculated shutoff pressure with the trim size previously selected. Select reverse acting for air to open (fail close) applications or direct acting for air to close (fail open) applications.

Make sure the required air pressure is available for the spring range selected.

Sizing Example 1:

Fluid: Saturated Steam

Application: Temperature Control

P₁: 125 psigg

Flow: 1750 lbs/hr

Actuator: Air to open (Fail Close)

Solution:

Since this is a temperature control application and we do not know the P₂ pressure, we will size the valve with a 30% pressure drop.

We need to use the subcritical flow formula.

$$C_v = \frac{1750}{2.1\sqrt{(37)((125+14.7)+(88+14.7))}} = 8.8$$

Refer to the Cv charts on Page 4. Select a 1" Contoured top guided with full port trim. The 1" is chosen over the 3/4" because the valve will control best between 15% - 85% of maximum valve capacity. The 3/4" valve would be operating at 98% of valve capacity.

These formulas are derived from the ANSI/ISA-75.01.01 standard to allow for easy daily use. These simplified formulas contain assumptions on some parameters and will always give a conservative sizing.

For detailed sizing using the ANSI/ISA-75.01.01 approach, use Armstrong selection software.
